

A High Level Research Solution

no need for questionnaires any more,
ProtexMe provides the answers in real time !

ProtexMe is a proven solution that can be used for high level research to monitor drivers cellphone usage behavior while driving.

This includes usage of SMS, voice calls, WhatsApp ,Facebook ,Facetime ,Snap Chat and all other apps while driving as well as the number of driver clicks on each app while driving.

We have developed a very advanced management tool that reports all activity with break downs of exact reading of how many clicks, how many minutes of voice calls at what speed and what location and all this in real time.

ProtexMe has developed a product in conjunction with Or Yarok which is Israel's leading organization for increased road safety

The ProtexMe platform was developed based on actual real life research by Or Yarok which measured actual driver behavior pattern and psychology.
